https://www.linkedin.com/in/akhilanvengala | https://github.com/akhilan9 | Portfolio

Summary

Information Technology undergraduate with a **9.15 CGPA** and hands-on experience in **Software Development**, **AI/ML**, and **Cybersecurity**. Skilled in **Java**, **Python**, **React**, and **Node.js**, with experience building AI-powered applications and solving **20+ cybersecurity CTF challenges**. Strong foundation in **Data Structures & Algorithms** and passionate about developing scalable, efficient software solutions.

Skills

Languages: Java, Python, C, JavaScript | **AI/ML:** TensorFlow, Keras, Pandas, NumPy, OpenAI Whisper

Frontend & Backend: React, Redux, Node.js, HTML, CSS | **Databases:** MySQL, MongoDB, Firebase

Cybersecurity: Wireshark, Burp Suite | **IoT:** Arduino, Raspberry Pi, NodeMCU | **Tools:** Git, Docker

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems

Education

Vignana Bharathi Institute of Technology — Hyderabad, India
Bachelor of Technology in Information Technology | **CGPA: 9.15/10** — *2023 – Present*

Narayana Junior College — Hyderabad, India
Intermediate Education (MPC) | **Percentage: 93.6%** — *2021 – 2023*

Projects

AI-Powered Multilingual Audio Transcription App | *Python, Streamlit, OpenAI Whisper, FFmpeg*
- Developed a multilingual speech-to-text application using OpenAI Whisper and Streamlit.
- Implemented subtitle generation and export functionality in TXT, PDF, and SRT formats.
- Designed a responsive interface for real-time audio transcription workflows.

AI Healthcare Risk Prediction Platform | *Python, Machine Learning*
- Built a machine learning-based healthcare prediction platform for disease risk analysis.
- Integrated predictive models and data-processing pipelines for real-time health assessment.
- Designed a scalable architecture supporting multiple disease-prediction workflows.

Smart Shopping Cart using IoT and RFID | *Arduino Nano, RFID, Embedded Systems, IoT*
- Implemented an IoT-enabled smart shopping cart using RFID technology for automated billing.
- Integrated Arduino Nano, RFID scanner, LCD display, and servo motor for product tracking.
- Automated product identification and billing through RFID-based detection.

Cybersecurity Experience

- Solved 20+ CTF challenges across steganography, cryptography, packet analysis, and web exploitation.
- Analyzed 20+ network traffic captures using Wireshark and performed web security testing using Burp Suite to identify vulnerabilities and security issues.

Achievements

- **First Prize** – Cybersecurity CTF Competition.

Certificates

- Database Management Systems (NPTEL)
- AI & Generative AI Basics (Microsoft)
- Getting Started with AI (IBM SkillsBuild)
- Python Full Stack Developer Virtual Internship (AICTE)
